# SAFER AT HOME: LEVEL 2

CONCERN

Does your county qualify for this level?

**≤10%**  
**10% positivity rates or less**

The percent positivity is defined as the percent of tests that come back positive, out of the total number of tests performed. The global standard to ensure that we are doing enough testing is a percent positivity of less than 5%.

**75-175**  
**cases per**  
**100,000**

The 2-week incidence, per 100,000 population, helps us understand how much the virus is circulating in a community. This is the number of cases for every 100,000 people in the past two weeks.

**No more than**  
**2 NEW**  
**Covid-19 hospital admissions per day**

One of our key goals is to ensure that every person who needs hospital care can receive it. This metric ensures that there is sufficient hospital capacity available. Stable is defined as no greater than a 25% increase in the county's referral hospitals or no more than 2 new hospital admissions with COVID-19 on a single day, in the past 14 days.
